

PRESS RELEASE – FOR IMMEDIATE RELEASE

Outerlink to speak at Airborne Public Safety Conference in New Orleans

28 JUL 2021 – Shreveport, LA –

Outerlink Global Solutions offers on-demand, actionable data for fleets of all sizes to improve training and increase overall safety. Highly customizable for rotorcraft and fixed-wing aircraft, Outerlink's IRIS system is a true command and control solution to maintain fleet communication, reduce downtime, fly safer, and improve training initiatives.

The IRIS solution has been instrumental in helping several organizations pinpoint focus areas for training and revitalize entire training programs and operating manuals, resulting in increased safety.

Jeff Warner, Vice President of Sales for Outerlink, will present a Tech Talk during the Airborne Public Safety Convention in New Orleans, focused on the unique training perspective IRIS data can provide.

"Refining the elite pilot: using data to produce a customized training plan for a high performing staff," is scheduled for Thursday, July 29th at 1pm at Tech Talk Theater 1. Attendees are encouraged to attend and see firsthand the incredible amount of data IRIS pulls from individual flights, and how organizations can translate that data into significant changes within their training programs.

Outerlink is exhibiting on Booth #326 and will provide demos of the IRIS software during the conference.

About Outerlink:

Outerlink Global Solutions is focused on providing organizations with solutions to identify and mitigate risks. IRIS is a turnkey solution for maintaining operational control and oversight from a single corporate operator to fleet operations. Combining the four key elements of monitoring, alerting, tracking and communication, IRIS exceeds any system commercially available today. For more information, visit Outerlink.com.
