CNC Technologies Highlights Capabilities of CNC.LIVE by Connecting Multiple Florida Law Enforcement Agencies During Hurricane Ian

Defense-grade technology supports communities in Florida by delivering latest generation interoperable airborne law enforcement solutions between agencies during natural disaster.

FLORIDA (October 2022) – CNC Technologies, an aviation technology and wireless communications company serving the law enforcement, military and government markets, announced today the crucial role of its cloud-based, CNC.LIVE solution as the airborne law enforcement video and data hub for surveying Hurricane Ian. First adopted as part of the public safety efforts for Super Bowl LIII in Atlanta, Georgia, CNC.LIVE is a defense-grade online portal that was developed to enhance situational awareness and to support multi-agency response during large scale operations as well as any aerial law enforcement mission.

During Hurricane Ian, multiple agencies across the Florida regions utilized CNC.Live as a resource for hosting, viewing, and sharing real-time aerial downlink footage of the catastrophe. Additionally, these agencies were able to work together on search-and-rescue missions and monitoring the impact of the Hurricane in real-time. CNC.Live played a crucial role for Florida law enforcement agencies because it allowed partner agencies real-time access to the same video assets. This allowed for the improved ability to coordinate effective joint responses during the hurricane.

“CNC.LIVE is the industry’s most advanced airborne intelligence solution for centralizing multiple video and data streams and delivering it to the people who need it most, providing actionable, real-time intelligence to officers on the ground,” said Alex Giuffrida, founding partner at CNC Technologies. “These aspects of our technology were crucial during the missions carried out by Florida Law Enforcement Agencies. We are thankful to have been a part of these extremely important missions carried out through CNC.Live during the hurricane.”

CNC.LIVE is currently in use by more than 28 agencies across the US including several state and local agencies in the state of Florida. There is no other company anywhere in the United States that provides the seamless, interoperable software that CNC.Live boasts. We are grateful that CNC.Live was able to help during such a volatile time in Florida.

The solution leverages CNC’s deep expertise developing state-of-the-art airborne law enforcement and intelligence systems for major government operators and is backed by the company’s 24/7, 365-day-a-year support.

About CNC Technologies

CNC Technologies is an aviation technology and wireless communications company serving the law enforcement, government and military markets. Providing custom aerial surveillance, data transmission and counterterrorism solutions, the CNC team brings decades of experience deploying local, national and global communications networks for the world's most demanding operators. CNC works with clients around the globe, delivering customized mission suite solutions tailored to match each organization's specific mission requirements and backed by unparalleled 24/7 service and support. The company is online at www.cnctechnologies.com.
