## **AeroBrigham Expands Capabilities with Additional Hangar Space**

*February 13, 2023 - Decatur, Texas*

Responding to a significant increase in demand, North Texas fixed and rotary-wing maintenance, repair, and overhaul (MRO) provider, AeroBrigham has announced the company will expand with new hangar facilities at the Decatur Municipal Airport (KLUD). The new facility will be used exclusively to support helicopters while the current facility will be dedicated to fixed wing MRO, support and completions.

In addition to 45,000 square feet of additional floor space, AeroBrigham will also offer a sophisticated "down draft" type aircraft paint facility capable of handling transport category helicopters. Specialized aircraft painting technicians will operate the paint facility and this will complement the overall efficiency of aircraft refurbishment, reconfiguration and completions. The new floorspace will also allow continuing improvements for the support of both fixed and rotary wing customers at AeroBrigham.

AeroBrigham will again be exhibiting during the upcoming Helicopter Association International (HAI) Heli-Expo at the Georgia World Congress Center in Atlanta, Georgia from 7-9 March 2023. The company exhibit #C4224 will feature a newly completed Bell 407 delivered to the Orange County Sheriff's Office in Florida.
