

Spectrum Aeromed will showcase a variety of equipment on display, including its expanded Liquid Oxygen (LOX) options, at the [2023 HAI HELI-EXPO](#) March 7-9th at the Georgia World Congress Center in Atlanta, Georgia.

Stop by **Booth C2604** to explore Spectrum Aeromed's LOX options certified in the Bell 429, AW 109/119 and King Air 350 air ambulances. In addition to its existing certifications, Spectrum Aeromed has certifications in process for the Bell 407 and Pilatus PC-12. The company anticipates further growth of its LOX certifications as client needs continue to rapidly evolve.

In the five years since its first LOX system installation on a King Air 350 aircraft, Spectrum Aeromed has worked tirelessly to develop its LOX options and expand this innovative technology into new aircraft models. Highly-efficient liquid oxygen technology allows for a larger volume of oxygen onboard with a smaller footprint, empowering EMS operators to safely fly longer and further with reduced downtime for oxygen refill. Spectrum Aeromed is dedicated to bringing this life-saving efficiency to a diverse portfolio of air ambulances, starting with the Bell 429, AW 109/119 and King Air 350.

Experience the future of air medical technologies. Visit Spectrum Aeromed at Booth C2604 during HAI Heli-Expo. Schedule a meeting with a Spectrum Aeromed representative to learn more: <https://calendly.com/spectrum-aeromed/hai-heli-expo-2023>
