

For Immediate Release

**DART Aerospace Exhibits at UK Survival and Flight Equipment Symposium – SAFE Europe
- Highlights innovative helicopter emergency flotation and liferaft systems**

Hawkesbury, Ontario Canada – April 05, 2016 – DART Aerospace continues to expand its leadership as an international designer, manufacturer and maintainer of innovative helicopter flotation and safety equipment.

DART Aerospace representatives will highlight the company's comprehensive aviation safety equipment capabilities at the 23rd SAFE Europe Symposium at the Beaumont Estate Hotel, Old Windsor, UK on April 11-13, 2016 where it will display its' Airbus Helicopters H125/AS350 Quick Release Emergency Float System With Integrated Liferrafts. This system is ideal for multi-mission operators looking to gain payload by quickly removing up to 125 lb. (57 kg) by simply disconnecting all float bags and the reservoir when floats are not required.

"DART Aerospace is dedicated to the helicopter industry safety," says Alain Madore, DART's Vice President of Commercial Operations and Aftermarket. "For the past 20 years, we have been developing innovative lightweight and reliable emergency flotation systems and we now equip over 30 helicopter models made by six leading OEMs."

DART's inflatable systems are utilized by helicopter operators serving the global offshore oil and gas industry as well as for other overwater missions flown by private, commercial, government and military helicopter operators around the world.

The exclusive DART emergency float systems with integrated liferafts are significantly lighter (up to 75 lb./34 kg) due to their patented lightweight material and components. They also require 50% less maintenance intervals in order to drastically reduce maintenance cost and aircraft downtime while improving safety. The external mounted liferafts can be quickly deployed by an activation lever to save critical time during emergency situations and provide operators with extra cabin space to maximize passenger capacity compared to stowing life rafts in-cabin.

DART's network of international repair and overhaul facilities – FAA Part 145 and EASA Part 145 – offer exclusive exchange programs, repairs, testing and repacking of emergency floats and systems, liferafts and vests, including inflatable products made by third-parties with best-in-class turnaround time.

Helicopter operators and safety managers attending SAFE Europe are invited to schedule a meeting with DART sales and support executives from Europe by contacting Adrien Dillard, Regional Sales Manager, +44 748 273 3726 or adillard@dartaero.com

ABOUT DART AEROSPACE

DART Aerospace is "Mission Ready". A privately held aerospace company, we provide industry-leading design, manufacturing and market-certified solutions for the helicopter and aerospace industry. With an impressive line-up of over 700 STC's and 5,000 products, DART offers a comprehensive portfolio of: aftermarket products, accessories, spare parts and tools for civil and military operators, all major rotorcraft OEMs, completion centers and MR&O facilities. DART's key products include: flotation systems, landing gears, interior and exterior accessories, cargo expansion, external loads, cable cutters and engine filtration systems. All this, in addition to extensive engineering capabilities and manufacturing centers delivering fast time-to-market solutions with superior customer support in over 120 countries worldwide.
