Dallas Avionics to Distribute Freedom Communications System Analyzer Products from Astronics

(DALLAS, TEXAS, August 27, 2019) – Dallas Avionics, Inc., announced today that the company will distribute the Freedom line of communications test equipment from Astronics. The new agreement makes Dallas Avionics an authorized distributor of the entire Freedom line for the U.S. Federal Government market.

“Dallas Avionics has years of experience, a trained sales team, and extensive expertise with test equipment,” said Astronics representative, Ed Mick. “Having Dallas Avionics distributing our products is a value add to customers. The company not only knows and understands test equipment, but also has a deep-rooted understanding of the industry. Its strong reputation working with government agencies, commitment to customer service, and strategically-located teams across North America are real wins for us,” said Mick.

The Freedom line of products includes the R8100, R8000, R8600, and R9000. Both the R8000 and R8100 support every major Land Mobile Radio (LMR) protocol. They are capable of testing P25 Phase 1 and Phase 2 radios.

“We want the test equipment we distribute to be versatile, user-friendly, and proven in the field,” said Dallas Avionics Vice President of Sales, Scott Davis. “The Astronics Freedom line of products accomplishes all of that, and Astronics offers six decades of proven reliability. We not only sell a lot of aircraft radios and components, but also sell the equipment to test radios and keep them operating for a longer period. Taking care of customers’ investments is critical. That is a core value we share with Astronics.”

For more information about the Freedom Products, visit booth 415 at AUTOTESTCON 2019 from August 26th through 29th in National Harbor, Maryland.
