Evans Incorporated Takes Organizations to New Heights with Launch of PropelUAS

The award-winning Human-Centered Solutions consulting firm’s innovative new division forges the future of UAS program implementation, launches at ALEA 2017

FALLS CHURCH, VIRGINIA – July 26, 2017 – Evans Incorporated (Evans) announces today that it has launched a new division, PropelUAS, which is changing the game and forging the future of UAS Program implementation process and technology. PropelUAS’ team of unmanned systems, air traffic control, aviation training, human factors, airports, and aviation strategy experts form an innovative, full-spectrum experience, from ‘Idea’ to ‘Operations’ (IDEA-OPS™). This gives organizations the capability to navigate often complex and overwhelming regulatory channels with a ‘what’s allowed where, what’s not, and where exceptions can be made,’ to its ‘been there, done that’ approach.

PropelUAS differentiates itself from key competitors in the UAS space in its ability to operate as an innovative ‘translator’ across the UAS program implementation process, to navigate key ever-changing regulatory and technology landscape considerations and maximize outcomes within a larger operational context. PropelUAS leverages the latest tools and determines the correct platform, sensor, or software for the job to ensure organizational integration to maximize the bottom line. This creates ROI – Real Operational Impact™ to derive top benefits and value from their UAS programs overall. Its ability to compress public and private sector questions about aviation regulation, compliance, standards, and impacts to ‘near-zero’ and in real-time - saves clients time and money to get programs started as much as 20% faster than a competitor without this knowledge, and getting them back more quickly to focusing on their core business.

Targeting key organizations within a number of industries, including PropelUAS, drives unmatched expertise and value to advance the UAS industry and technology as a whole, focusing on four chief service offerings:

- Strategy;
- Operations;
- Safety; and
- Risk Mitigation.

As Law Enforcement is among the top target markets for early roll-out of its expertise and services, PropelUAS officially launched this week at the Airborne Law Enforcement Association (ALEA)’s annual expo in Reno, NV. PropelUAS’ Andy Osantowske will conduct a technical briefing on the conference center floor titled, “UAS Regulatory Paths of Law Enforcement Organizations,” on July 27 2017, from 1:00-1:45pm PDT. Other target industries for focus
following the initial launch include Emergency Management, First Responders, Security, State and Local Government, Oil and Gas (Energy), Industrial Inspection, Construction, Telecommunications, Media and Agriculture.

“PropelUAS is truly changing the game - bringing a smart, innovative, and full-spectrum approach to the often overwhelming and challenging UAS program implementation process,” Bob Etris, Director of PropelUAS’ and Evans’ Aviation Business, said. “The Law Enforcement space has continued to become more sophisticated when it comes to UAS technology and initiatives. We recognize this and see this market particularly as a place to have an early and impactful effect on the evolution of the UAS industry as a value-added partner and expert going forward.”

**About PropelUAS**

PropelUAS is a division of Evans Incorporated, and takes organizations to new heights by leveraging 20+ years of aviation industry expertise, as well as bringing together a dedicated team of unmanned systems, air traffic control, aviation training, human factors, and airports. PropelUAS differentiates itself from key competitors, in its ability to operate as an innovative ‘translator’ across the UAS program implementation process, to navigate key regulatory considerations and maximize outcomes within a larger operational context. Targeting key organizations within a number of industries, including Law Enforcement, Emergency Management, First Responders, Security, State and Local Government, Oil and Gas (Energy), Industrial Inspection, Construction, Telecommunications, Media and Agriculture, PropelUAS is a ‘game-changer’ that drives unmatched expertise and value to advance the UAS industry and technology as a whole, from ‘Idea’ to ‘Operations’ (IDEA-OPS™).
