## Swedish Police Enhances Air Support Unit's Mission Effectiveness with Trakka Aerial Computer

**Ärla, Sweden (18 November 2025)** – The Swedish Police Air Support Unit is enhancing its fleet of nine Bell 429 helicopters with Trakka's TM100-PC fixed-mount computers. A part of planned mid-life systems upgrades, the TM100-PC is an RTCA DO-160 approved aerial computer system that acts as a nexus for mission-critical systems, enhancing the Swedish Police's aerial law enforcement and critical response public safety operations.

### Commitment to Excellence

The Swedish Police Air Support Unit, organised by the National Operations Department, operates its nine Bell 429 helicopters from five bases located throughout the country, ranging from Boden in the north to Östersund, Stockholm, Gothenburg, and Malmö in the south.

The Air Support Units man their helicopters around the clock to execute missions as varied as aerial surveillance, vehicle pursuits, and search and rescue. The helicopters are also used for rapid response transportation to reduce transit time during critical interventions by bomb technicians and officers of the National Task Force.
