

**Subject:** Digital AirWare Announces Strategic Partner Ecosystem to Strengthen Operations

**FOR IMMEDIATE RELEASE**

Digital AirWare Announces Strategic Partner Ecosystem to Strengthen Operations, Maintenance, and Training.

Charlotte, North Carolina - February 2026 - Digital AirWare (DAW) is an aviation software company focused on supporting operators through streamlined digital solutions that enhance operational efficiency, visibility, and decision-making. Digital AirWare today announced a series of strategic partnerships designed to enhance parts logistics, maintenance support, and operational training for its customers. Together, these partnerships create a more connected and efficient ecosystem that helps operators streamline operations, reduce downtime, and improve mission readiness.

The partnerships include Aero Products, TurboLyft, SR3 Rescue Concepts, Tactical Flying, Rotorcraft Repair & Manufacturing, and Atlantic Coast Components — each bringing specialized expertise that integrates with or complements the Digital AirWare platform.

Digital AirWare's goal is to simplify and strengthen operations by partnering with trusted leaders across logistics, maintenance, repair, and training, giving customers access to proven resources through a more connected and efficient experience.

---

Through its partnership with Aero Products, Digital AirWare customers gain streamlined access to parts logistics directly through the DAW software—providing an “easy button” for ordering parts and managing logistics. Founded in 1986, Aero Products has supported rotary-wing operators for more than 38 years and is recognized worldwide for its high standards and dependable customer support.

Digital AirWare has partnered with TurboLyft to provide customers with access to comprehensive Airbus Helicopter maintenance, completions, inspections, and parts support, as well as law enforcement mission equipment installations. TurboLyft specializes in heavy maintenance, full-service completions and repairs, advanced avionics upgrades and integration, and in-house manufacturing and modifications, including STC capabilities and CNC machining, and reflects TurboLyft’s philosophy of “Built Not Bought.”

SR3 Rescue Concepts joins the Digital AirWare partner ecosystem as a specialized training provider offering custom, hands-on helicopter hoist rescue and high-risk operational training. SR3 supports flight crews, rescue professionals, first responders, and specialized mission teams with real-world, mission-focused instruction under its guiding principle, “Precision Training. Real Missions.”

## **TACTICAL FLYING**

Through its partnership with Tactical Flying, mutual customers gain access to custom e-courses and digital training programs designed to support scalable, accessible learning. These offerings complement in-person training and help operators maintain proficiency and standardization along with their TFO accreditation program.

Digital AirWare is one of only two authorized distributors for DSX and rotor blade repair services through its partnership with Rotorcraft Repair & Manufacturing. Rotorcraft Repair & Manufacturing LLC holds an FAA-certified repair station specializing in non-destructive inspection techniques, bonded structure maintenance, and the repair, modification, and overhaul of helicopter main and tail rotor blades. Services support civil, public use, and military operations, with capabilities extending from inspection and restoration to full blade configuration modifications.

### **Atlantic Coast Components**

Digital AirWare partners with Atlantic Coast Components (ACC) to support Airbus AS350, AS355, and EC130 operators with dynamic component exchange, repair, and overhaul solutions. Through this collaboration, customers gain access to ACC's extensive inventory of ready-to-fly rental and exchange gearboxes, paired with DAW's real-time forecasting tools to reduce Aircraft on Ground (AOG) risk, improve turnaround times, and maintain higher flight readiness across commercial and law enforcement operations.

Together, these partnerships reinforce Digital AirWare's commitment to providing operators with a comprehensive support ecosystem — combining software, logistics, maintenance, repair, and training into a unified operational advantage.

### **About Digital AirWare**

Digital AirWare (DAW) is an aviation software company focused on supporting operators through streamlined digital solutions that enhance operational efficiency, visibility, and decision-making.
