

FOR IMMEDIATE RELEASE

New EC135 Windshields and Nose Bubbles now in stock at Tech-Tool Plastics

In Stock and Ready to Ship for the Airbus/Eurocopter EC135 and H135 Family

FORT WORTH, Texas (Monday, September 14, 2026) — Tech-Tool Plastics, Inc. has released new windshields and nose bubbles for the Airbus/Eurocopter EC135 and H135 helicopter family, built to the same standard of precision fit and durability that has defined the company's windows for 50 years.

"I don't usually have windows this clear," said the test pilot after assessing Tech-Tool's new EC135 windshield.

Superior Optics

Tech-Tool's EC135 windshields and nose bubbles, available for all EC135 and H135 models, are manufactured in-house using the company's own precision tooling. Every window holds a true, distortion-free shape from edge to edge. Tech-Tool's proprietary technology yields optically superior windshields with no distortion, giving pilots a significantly cleaner sightline.

"Fifty years in, what we're most proud of is that we keep showing up with the products operators actually need. There is a real gap in this market for EC135 windshields and nose bubbles that have easy availability and unrivaled clarity. That's what drives us to keep expanding our product line, so every operator has access to windows they need when they need them." said Tech-Tool Plastics President John Tracy Wilson.

In Stock and Ready to Ship

The new windshields and nose bubbles are currently in stock and ready to ship. Maintaining inventory levels for all of their products has been Tech-Tool's long-standing priority, so when operators have a need they are quickly able to fill it.

About Tech-Tool Plastics

For 50 years, Tech-Tool Plastics has designed and manufactured high-quality replacement windows for the rotorcraft industry. With a commitment to quality, innovation, and customer service, Tech-Tool serves law enforcement and EMS agencies, operators and MROs worldwide.
